AGENDA

Dyslipidemia in Primary Care:

Implications of the 2021 CCS Dyslipidemia Guidelines

- The following topics will be covered during this program
- ✓ What's New in Primary Prevention
 - Who and How to Screen
 - Treatment Approach for Primary Prevention Patients
- ✓ The Role of non-HDL-C, apoB, and Lp(a) in Improving Risk Assessment
- ✓ Coronary Artery Calcium Scoring: When is it useful
- ✓ What's New in Secondary Prevention
 - Thresholds vs. Targets: When to intensify treatment
 - Which patients derive the most benefit
 - Managing persistent risk beyond LDL-C
- ✓ Integrating Guidelines into Clinical Practice

LEARNING OBJECTIVES

Upon completion of this activity, participants will be able to:

- Explain the key updates to the 2021 CCS Dyslipidemia Guidelines for primary and secondary prevention
- Identify those patients who would benefit from additional therapy beyond statins to reduce CV risk
- Appropriately apply the new 2021 CCS Dyslipidemia Guideline recommendations into routine clinical practice

This Group Learning program has been reviewed by the College of Family Physicians of Canada and is awaiting final certification by the College's

This program has received an educational grant and in-kind support from Amgen Canada
