

YOU ARE INVITED TO JOIN US FOR A CLINICALLY RELEVANT EDUCATIONAL ACTIVITY.

BAD TO THE BONE

Medications Associated
with Increased Fracture Risk

This clinically relevant and interactive (case-based) program was developed by leading Canadian experts to address the importance of risk assessment, screening and management for all patients at high risk for stress fracture with the particular focus on the use of medications that are associated with bone loss, osteoporosis, and fragility fractures. This program aims to translate scientific and clinical evidence into practical steps and incorporates expert recommendations into practical strategies applicable to primary care practice.

AGENDA & LEARNING OBJECTIVES

The following module will be presented:

BAD TO THE BONE

Medications Associated with Increased Fracture Risk

LEARNING OBJECTIVES

Upon completion of this activity, participants will be able to:

- Describe the morbidity, mortality and economic burden of illness associated with osteoporosis in Canada
- Explain the factors that determine osteoporotic fracture risk
- Identify medications associated with bone loss and increased fracture risk
- Mitigate the impact of medication-related factors which may increase the risk of bone loss and fragility fractures

This one-credit-per-hour Group Learning program has been certified by the College of Family Physicians of Canada and the Chapter for up to Mainpro+ credits.

This program has received an educational grant and in-kind support from Amgen Canada
