AGENDA

LEARNING OBJECTIVES

Dyslipidemia in Primary Care:

Implications of the 2021 CCS Dyslipidemia Guidelines

- The following topics will be covered during this program
- √ What's New in Primary Prevention
 - Who and How to Screen
 - Treatment Approach for Primary Prevention Patients
- ▼ The Role of non HDL C, apoB, and Lp(a) in Improving Risk Assessment
- √ Coronary Artery Calcium Scoring: When is it useful.
- √ What's New in Secondary Prevention
 - Thresholds vs. Targets: When to intensify treatment
 - Which natients derive the most benefit
 - Managing persistent risk beyond LDL-C
- Integrating Guidelines into Clinical Practice

Upon completion of this activity, participants will be able to:

- Explain the key updates to the 2021 CCS Dyslipidemia Guidelines for primary and secondary prevention
- Identify those patients who would benefit from additional therapy beyond statins to reduce CV risk
- Appropriately apply the new 2021 CCS Dyslipidemia Guideline recommendations into routine clinical practice
